

The TechWare TW\_LINK and TWCVRT programs are used to collect and convert instrument data. Numerous test instruments such as the UT3, UR3, Autosorter and Zweigle D302 can be connected to one computer running these applications. The data is collected and converted into the LogBook data file. This is a phenomenal time saver! Test information and statistics can be analyzed via company networks or stand alone lab systems. Routine quality control reports and graphs can be scheduled and distributed in many file formats.
